TECHNICAL SUMMARY

Full-Stack Developer specializing in the **.NET Ecosystem & React**. Evolved from a solid foundation in **C++ / OOP** and desktop application architecture into building secure, scalable, and high-performance web systems. Proficient in **SOLID principles**, decoupled **Clean Architecture**, and **API Security**.

CORE SKILLS

- **Backend:** ASP.NET Core, C#, Web API, EF Core, SignalR, ADO.NET.
- **Frontend & DB:** React, TypeScript, Tailwind CSS, React Query, SQL Server, T-SQL.
- **Architecture & Tools:** Clean Architecture (MediatR-free design), SOLID Principles, Repository Pattern, Unit of Work, PowerShell (Automation), Git.

PROJECTS

Maintenance Task Tracker / Full-Stack Web Application

ASP.NET Core | React | TypeScript | SQL Server | SignalR

- **System Architecture:** Developed a real-time full-stack tracking system implementing **Clean Architecture** to decouple core application logic from external infrastructures, featuring a modular React frontend.
- **API Security:** Hardened backend endpoints by implementing a secure JWT authentication layer transmitted via secure **HttpOnly Cookies**.

Architecture Generator CLI Tool / Automation & Developer Tooling

PowerShell | .NET CLI

- **Boilerplate Automation:** Created a custom PowerShell script that instantly scaffolds production-ready .NET Web API projects pre-configured with Clean Architecture layers.

EXPERIENCE & EVOLUTION

Full-Stack Software Developer (Self-Directed) | *Jan 2024 – Present*

- **Architecture Migration:** Refactored legacy desktop software design mentalities into cloud-ready Web APIs, moving from raw **ADO.NET** to modern ORMs.
- **Backend Hardening:** Applied defensive programming patterns, including robust input validation and global custom exception handling middleware.

EDUCATION

- **B.Sc. in Computer Science** | Jerash National University | *Expected May 2027*
- **GPA:** 89.8 / 100 (Excellent Standing)
